

Press release

Kappa Data introduces social distancing & proximity tracing tool for companies: ProxiPass™

De Pinte, May 4th, 2020

Companies are allowed to reopen, at least if they can meet the necessary security conditions imposed by our government.

The most important condition is to monitor the 'social distance' between people, which must be at least 1.5 meters. Many companies are therefore confronted with the necessary difficulties to guarantee this.

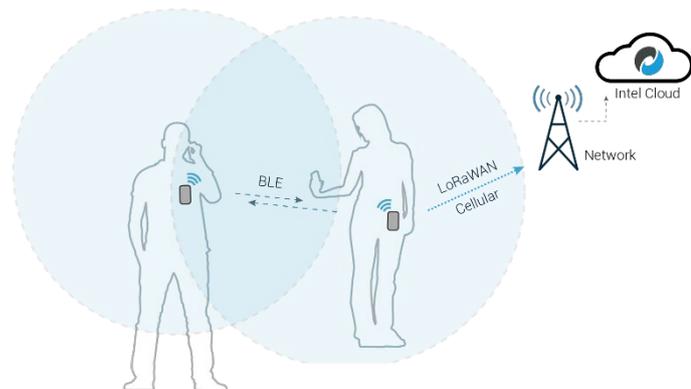

New

That's why Kappa Data is launching today the **ProxiPass™**, **powered by Kappa Data**: a solution that monitors and maps the 'social distance' between people.

How does it work?

Our solution is based on the **Option CloudGate**, a multi-purpose IoT gateway that has been in the Kappa Data portfolio for some time. For this application we provide the CloudGate with a **LoRaWAN** interface on the one hand and a **4G** card on the other hand.

“ProxiPass™, simple social distancing monitors for companies.”

In the proximity tracking tool, each person present receives a personal badge which he/she is constantly wearing, and which contains 2 functions:

Firstly, the personal badge includes a 'buzzer' that makes noise when people get too close to each other. This detection is based on **Bluetooth**, where the time and distance are adjustable.

The second function of the ProxiPass™ tool runs via LoRaWAN, which transmits the information to the secure gateway and which in turn is connected to a central platform where all data is collected and analysed.

Headquarters - Belgium: Grote Steenweg 18, 9840 De Pinte, +32 9 243 42 10, sales@kappadata.be

The Netherlands: Laan van Zuid Hoorn 51, 2289 DC Rijswijk, +31 70 764 06 00, sales@kappadata.nl

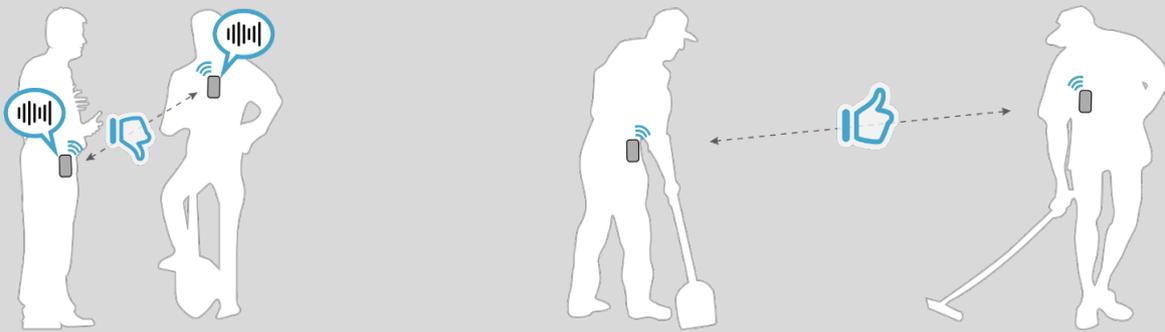

Poland: Wczasowa 50A, PL 39-460 Nowa Dęba, +48 15 819 32 01, sales@kappadata.pl

Collaboration

To this end, Kappa Data has entered into a cooperation agreement with platform builder WMW. On the proximity tracing platform, the administrator can view all the information collected and is given an overview of possible breaches of the security rules.

In the event that one of the employees turns out to be infected, an overview can quickly be made of the persons who have been in contact with this infected employee (frequently and for a longer period of time).

Unlike other solutions, the Kappa Data ProxiPass™ solution is easy to install and can be used very quickly. For more information we would like to refer you to www.proxipass.be or contact us by mail or telephone (contact details see below).

About Kappa Data – Value-Added distributor in Network & Security Solutions

Kappa Data (www.kappadata.eu) is a Value-Added Distributor and offers a complete portfolio of IoT, network and protection solutions for Enterprise and SMB environments. Through its resellers Kappa Data offers end clients solutions for connectivity, monitoring, management and data protection.

Choosing Kappa Data means providing excellent client support, thorough technical knowledge and innovative, top quality products. Kappa Data gives priority to a long-term relationship with its clients and has been rewarded for this with many prizes.
